

Fundamentos de Cálculo Aplicado

Fundamentos gerais sobre
limites e derivadas

Profa. Ma. Alessandra Negrini

Encerramento

The image shows a chalkboard with handwritten mathematical work. The main equation is an integral of a function involving x^2 , \sqrt{x} , and $\frac{x}{2}$. Below it, the result is evaluated from 0 to 2, yielding $\frac{33}{140}$. To the right, there are additional expressions: $(x^2+y) dx dy$, $\cos(x+y) dx dy$, and $\sin(x^2+y^2)$. A hand is visible at the bottom right, holding a piece of chalk.

$$dx = \int \left(x^2 \sqrt{x} + \frac{x}{2} - x^4 \frac{x^4}{2} \right) dx$$
$$= dx = 0 \left(\frac{2}{7} x^{\frac{7}{2}} + \frac{x^2}{4} - \frac{3}{10} x^5 \right) \Big|_0^2 = \frac{33}{140}$$

$(x^2+y) dx dy$
 $\cos(x+y) dx dy$
 $\sin(x^2+y^2)$

Competências da disciplina

Compreender os conceitos relacionados a limites e derivadas, bem como reconhecer os tipos de problemas nos quais esses conceitos podem ser aplicados.

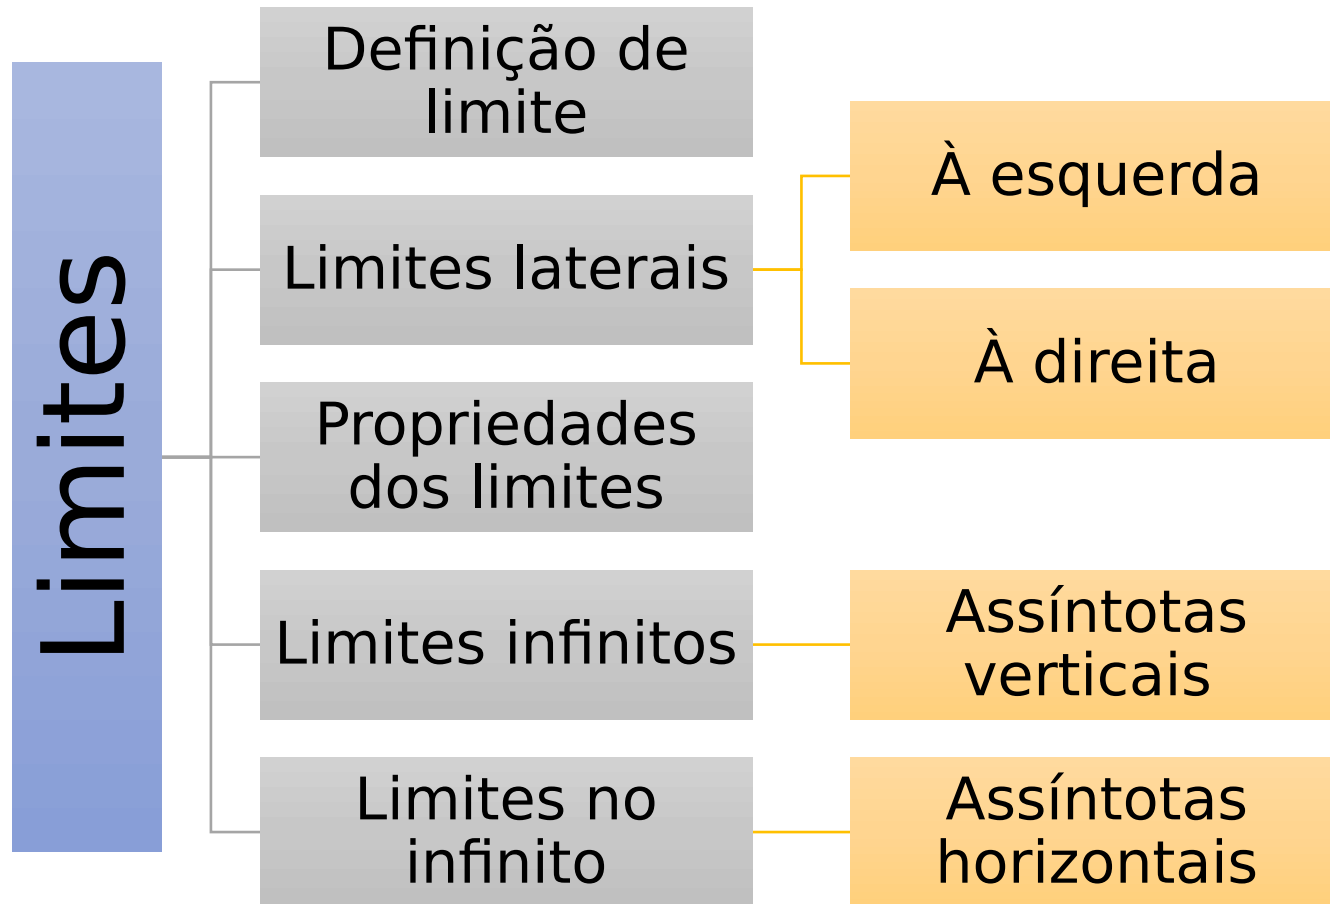

Competências ENADE

- Resolver problemas.
- Utilizar diferentes representações para um conceito matemático, transitando por representações simbólicas, gráficas e numéricas, entre outras.

Limites

Exemplos:

$$f(x) = x^2 - x + 2$$

$$f(x) = \frac{1}{x}$$

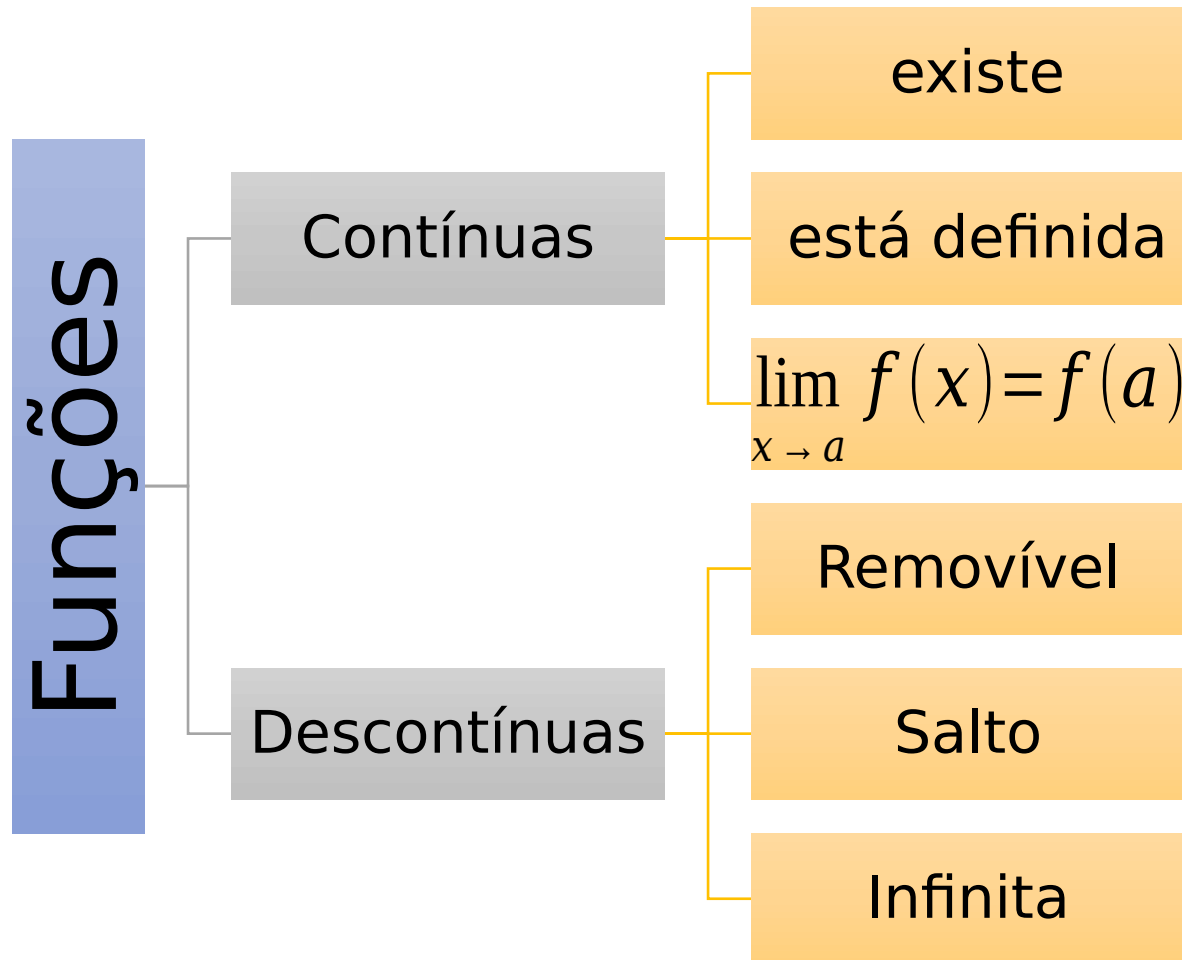

Exemplo:

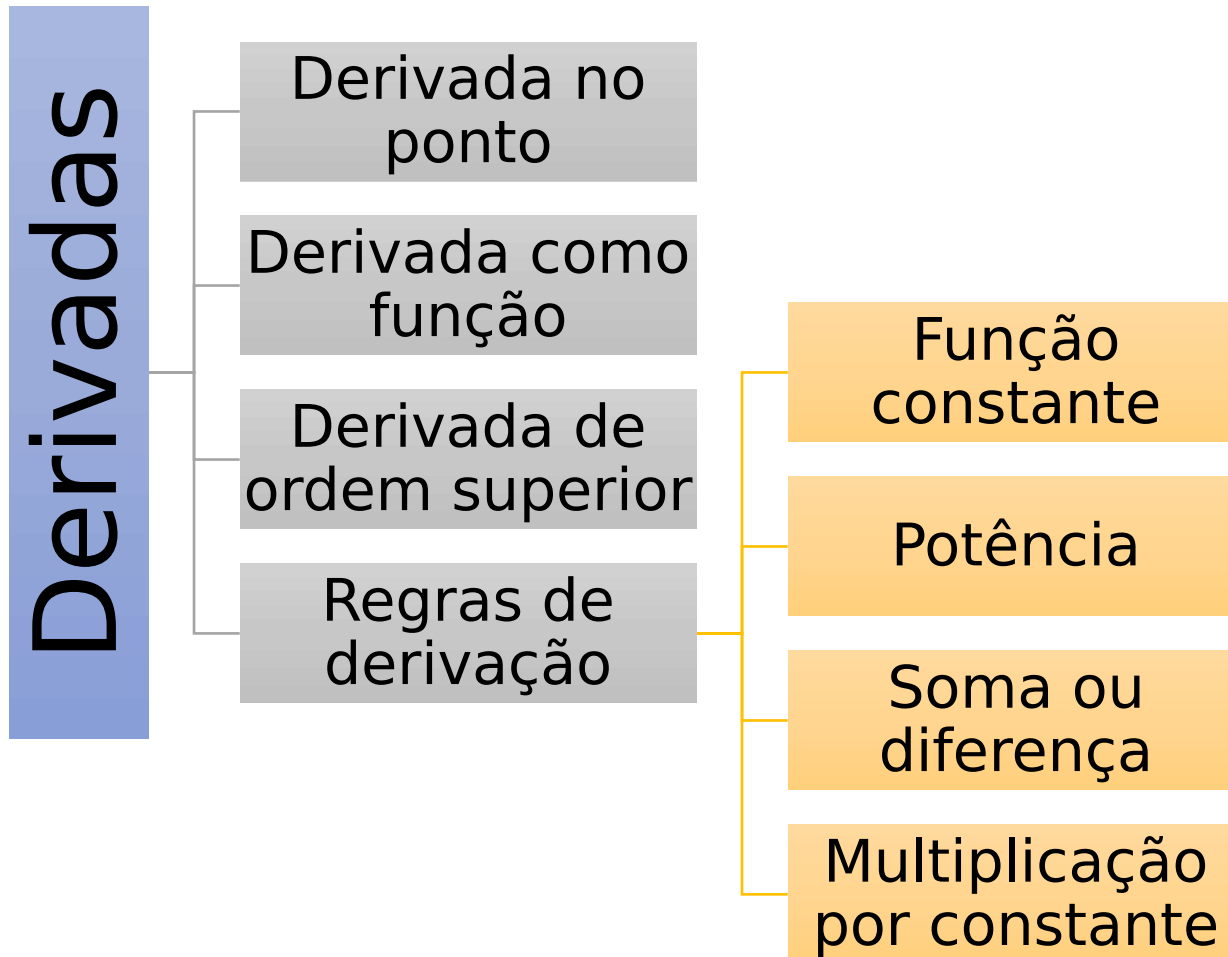

Continuidade

Derivadas

Exemplo:
